

What Is Claimed Is:

1. A sign including:
 - an fixed section including
 - 5 • at least one pair of bearings and
 - means for attachment to a power supply
 - a rotatable section having
 - means for attachment to the bearings on the fixed section, enabling rotation of one section about the other,
 - 10 • lights on the fixed and/or rotatable section(s) being powered from the power supply,
 - means for supplying power to fixed and/or rotatable section(s).
2. A sign as claimed in claim 1, wherein the means for supplying power to the display board is a slip ring device
3. A sign as claimed in claim 2, wherein an outer section of the slip-ring being attached to the fixed section and power supply thereon and remaining static, and an inner section affixed to the rotatable section and moving therewith
4. A sign as claimed in claim 2, wherein a central slip ring assembly is attached to the fixed section and remains static thereon, while bushes of the slip ring are attached to the rotatable section and rotate therewith.
5. A sign as claimed in claim 1, further including an electronic controller to animate the display lights.
6. A sign as claimed in claim 1, further including a motor for rotation of the rotatable section.

7. A sign as claimed in claim 1, wherein the power is provided from the mains.
8. A sign as claimed in claim 1, wherein the power is provided from an alternative source, such as a solar panel or a dynamo, powered from rotation of the rotatable
5 section.
9. A sign as claimed in claim 8, further including batteries to be charged by the solar panel or dynamo.
- 10 10. A sign as claimed in claim 9, further including change over circuitry to change the power source to the mains if the charge on the batteries decreases past a predetermined threshold.
11. A sign as claimed in claim 1, further including a photodiode to detect the ambient
15 light levels, and allow power to pass to the lights only when the light level drops below a certain predetermined threshold.
